The screenshot shows the EBSCOhost search interface. At the top, there's a navigation bar with options like '新檢索', '出版品', 'CINAHL 標題', '實證醫療收集資料', and '更多'. The search bar contains 'accidental falls' and has buttons for '檢索' and '清除'. Below the search bar, there are filters for 'AND' and 'OR' with dropdown menus for '選取權位 (可加選)'. On the left side, there's a sidebar with '縮小檢索結果' and '目前的檢索項目' sections. The main area displays search results for 'accidental falls' with 1-50 of 9,764 results. The first three results are highlighted with numbered callouts: 1. 'FALLS IN SURGICAL PATIENTS: SUBSIDIES FOR SAFE NURSING CARE.', 2. 'Does Fall Arrest Strategy Training Added to a Fall Prevention Programme Improve Balance, Strength, and Agility in Older Women? A Pilot Study.', and 3. 'The Got-A-Minute Campaign to Reduce Patient Falls with Injury in an Acute Care Setting.' On the right side, there's a '通訊社' section with news items like 'Medicare penalizes 4 Main...' and '2 VCU students killed in...'. The interface is annotated with numbered callouts 1 through 9 corresponding to the text above.
