BOOK CHAPTER

Adrenocortical Carcinoma and Severe Cushing Syndrome

William Young

Adrenal Disorders, Case 28, 103-105

Adrenocortical carcinoma (ACC) presents with overt symptoms of hormone excess (usually androgen, cortisol, or combined hypersecretion) in 30%–40% of cases.¹ Notably, even patients with incidentally discovered ACC or those presenting with symptoms of mass effect may have undiagnosed adrenal hormone excess. Uncontrolled or unrecognized overt Cushing syndrome (CS) carries additional morbidity and is a negative prognostic factor in patients with ACC. These patients are at high risk for deep venous thrombosis and pulmonary embolism, as well as infections. Surgical resection is the best therapy for ACC-related CS. However, when surgery is not possible, aggressive medical therapy for hypercortisolism should be initiated. Here, we present a case of metastatic ACC with severe CS of rapid onset.

Clinical Presentation

History

- Typical incubation period is 5 to 7 days after mosquito bite; ² consider in traveler who presents with fever up to 2 weeks after return ⁴
- History of prior dengue virus infection is common in endemic areas; this is significant because secondary infection with a different serotype results in more severe disease
- Presentation varies, ranging from asymptomatic or subclinical (majority of cases) to mild febrile illness, shock, and/or hemorrhage ⁷
- Febrile phase: begins with abrupt onset of fever, which persists up to 7 days ³

The screenshot displays the ClinicalKey interface. On the left, there is a sidebar with a 'Reading assistant' section, which includes a 'Beta' badge and a search bar labeled 'Ask about this article'. Below this is an 'OUTLINE' section with links to 'Introduction', 'Materials and Methods', 'Results', and 'Discussion'. The 'Materials and Methods' link is highlighted with a blue checkmark. On the right, the main content area shows the article title 'Asking the PRIME questions for grossing: Teaching a framework for grossing and constructing gross descriptions using the PRIME model'. Below the title, the authors 'Christopher C. Attaway, MD MSc; Danielle Fortuna, MD' and the publication information 'Academic Pathology, July 01, 2024, Volume 11, Issue 3, Article 100143, Copyright © 2024 The Authors' are listed. The 'Abstract' section begins with the text: 'Grossing is essential to the practice of anatomic pathology. The importance of this skill cannot be understated, but it simultaneously can be enigmatic for novice'.
