

Taipei Veterans General Hospital Biological Safety Level 3 (BSL-3) Laboratory

Taipei Veterans General Hospital (TVGH) and National Yang-Ming Chiao Tung University (NYMU) collaborate on SARS-CoV-2 virus in BSL-3 laboratory:

In response to the rampant COVID-19 pandemic, TVGH and NYMU are collaborating on relevant research on COVID-19. The BSL-3 laboratory was born out of the fervent expectations of residents in Taiwan. With the gradual lifting of epidemic prevention measures, we are learning to coexist with the virus, and therefore there is a greater need to understand the virus from scientific perspectives. The BSL-3 laboratory is a great asset to the TVGH-NYMU team, which has a strong research foundation. Through the operation of the laboratory, we look forward to contributing more scientific results to assist scientific research and epidemic prevention.

P3實驗室與陽交大啟動新型冠狀病毒研究之合作
