

Taipei VGH, Department of Pharmacy International Clinical Electives Training program for Pharmacy Students and Licensed Pharmacists

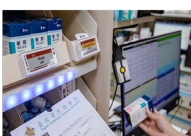

Introduction of Rotation Site

Taipei Veterans General Hospital (VGH)

Join the Department of Pharmacy at Taipei Veterans General Hospital (VGH)- the only hospital in Taiwan recognized in Newsweek's World's Best Hospitals for both 2024 and 2025. This distinction puts you at the heart of global healthcare excellence, training alongside outstanding professionals in an environment that blends clinical innovation, advanced education, and research. Our international training program, launched in 2010 under the Ministry of Health and Welfare, is now a top choice for pharmacy professionals worldwide. Here, you'll find outstanding opportunities to advance your career and contribute to the future of pharmaceutical care on a global scale.

You will benefit from rotations across our three specialized divisions: Dispensing, Compounding, and Clinical Pharmacy. Each division is equipped with the latest technology and innovative safety systems that meet international standards for patient care. Since 2012, our collaboration with the Federation of Asian Pharmaceutical Associations has allowed us to mentor over 80 pharmacists from 20 countries, building a strong global network. We have also welcomed students from the United States, Japan, and Malaysia, providing transformative training experiences that prepare future leaders in pharmacy.

Taipei Veterans General Hospital Department of Pharmacy

Objective

• Experience Integrated Pharmacy Services

Participate in all aspects of inpatient, outpatient, and clinical pharmacy using advanced and AI-driven systems.

• Advance Collaborative Patient Care

Build effective pharmacist-patient and team relationships to ensure high-quality care.

• Support Seamless Continuity of Care

Utilize digital processes to maintain continuity across all healthcare settings.

• Apply and Record Clinical Expertise

Translate pharmacy knowledge into patient care and document interventions accurately.
